

# POTS Management as a Service (PMaaS)

The easy, cost-effective way to manage legacy phone services

Many organizations still rely on Plain Old Telephone Service (POTS) for phones, faxes, alarms, and elevators. However, as telecom carriers phase out copper networks, costs rise while value declines. Businesses managing POTS in-house face high expenses, outdated infrastructure, and unclear migration options, often paying for services they don't fully understand or need.

vCom's POTS Management as a Service (PMaaS) provides a comprehensive solution to manage your POTS infrastructure. Using our vManager platform, managed services, and our Buyers' Club, we help businesses understand their environment, streamline their expenses, and migrate to modern technologies.

## BENEFITS

### ✔ Simplified management

One point of contact for all your POTS services and a seamless transition to modern solutions.

### ✔ Strategic guidance

Our experts guide you through every step, ensuring a smooth and cost-effective migration to the best available technologies.

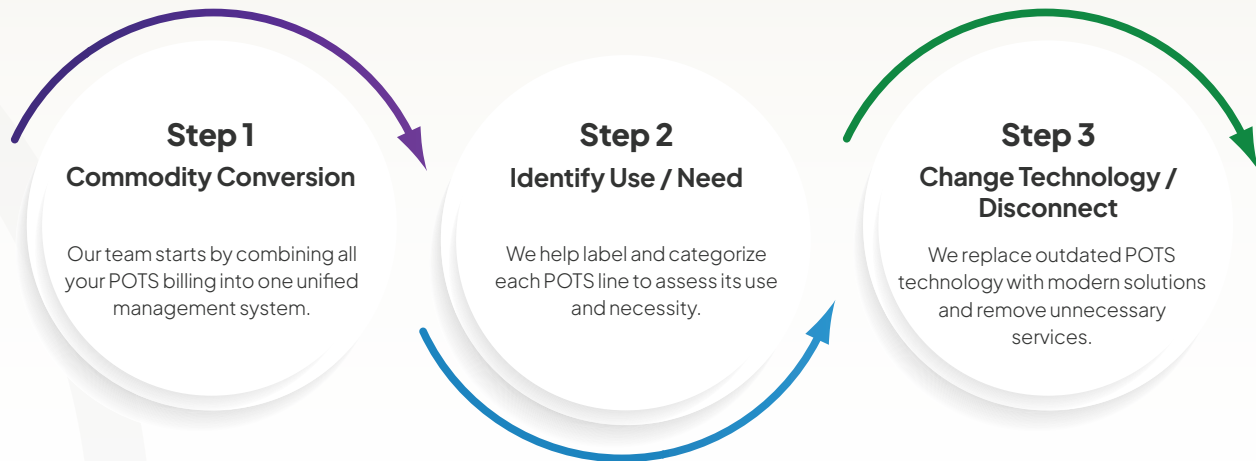

### ✔ Cost efficiency

Consolidated billing, improved inventory management, and strategic technology migrations result in long-term savings.

### ✔ Future-proofing

As copper networks are retired, we help your organization stay ahead with flexible, scalable, and future-proof solutions.

Switching from POTS can seem overwhelming, but our simple 3-step process makes it easy:

### Step 1 Commodity Conversion

Our team starts by combining all your POTS billing into one unified management system.

### Step 2 Identify Use / Need

We help label and categorize each POTS line to assess its use and necessity.

### Step 3 Change Technology / Disconnect

We replace outdated POTS technology with modern solutions and remove unnecessary services.

## KEY FEATURES

### ✓ Cost Control and Transparency

POTS billing is often outdated and unpredictable. vCom's PMaaS consolidates it into a single invoice, providing IT teams full visibility into costs, services, and market rates.

### ✓ Access to Market-Leading Partners and Flexible Solutions

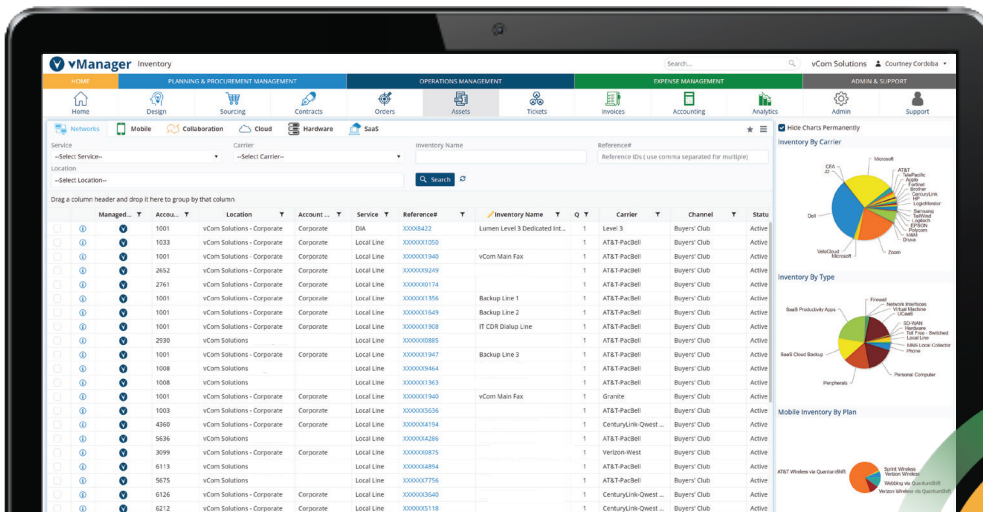

QuantumShift by vCom offers access to diverse POTS-replacement technologies, ensuring flexible, vendor-neutral solutions tailored to your business needs.

### ✓ Easily Transition to Modern Technologies

As carriers decommission copper networks, PMaaS simplifies migration with streamlined billing and access to affordable POTS replacements like VoIP and cellular data, ensuring a smooth transition.

### ✓ Optimize Inventory and Reduce Unused Services

PMaaS helps IT teams identify unused POTS lines, label functions, and eliminate unnecessary services, reducing waste and optimizing telecom costs.

vCom's PMaaS helps IT teams control telecom costs, transition to modern technologies, and optimize infrastructure for cost and performance, turning POTS management into a strategic advantage.
